TECHNICAL INSPECTION ROUNDS

Checklists have to be drawn up by the chief engineer for daily inspection rounds of the most important installations, machines and equipment (water purification, heating, air conditioning, refrigeration, and electrical plant).

The check list items include in particular functional checks and ensuring correct readings on the relevant equipment. The daily inspection round should be carried out by one or two hotel mechanics.

The technician must mark any technical faults etc. detected on this inspection round in the relevant check list and after signing it, return it to the chief engineer, who must arrange immediate repair.
